## Introduce yourself

### PROJECT BRIEF

Create a single page design for an online profile to introduce yourself to the web :) The aim of this project is to create a personal/professional profile page for yourself as a single page design. Selecting any information you find suitable, create a design which will present your chosen information clearly. The angle or approach is entirely up to you - personable/friendly/fun or polite/formal/professional?

### DELIVERABLES

The final submission must be **one single folder** - named by project and state your name. It has to include the following:

#### 1 work folder

- any drafts / sketches / wireframes you produced to plan your design
- working files: any files you worked on for the content or design of your site, such as your original, layered files (psd/ai/afdesign...) — if any.
- presentation video: mini/short presentation of your project, file sent as MP4

#### 2 site folder

standalone website folder for your **single page design**; the webpage must be online, linked to from your coursework homepage and viewable by the deadline as well as submitted separately.

*"Standalone" = a site using only relative paths which can be viewed offline as well as uploaded to any server directory and remain functional; this folder will be uploaded as submitted and linked to by the folder name only ~ ensure it will work correctly when viewed on-/off-line.*

### Notes on submission

For this project, I'll ask you to submit your webpage as standalone folder which I will upload to the eyelearn site, it will become the start of this year's gallery, showcasing your work. I will not change your files or file names and use the folder as you send it ~ and link to it by name. This our test run for any projects you submit to me :) If anything is wrong, you will spot this and send me an updated version.

Your folders should be named in a meaningful manner, include the HTML file (index.html) and any additional files which are included on your design.
